TO: Jim Cubera, PE, City Engineer, City of Farmington Hills, Engineering Division

RE: Franklin Knolls HOA Petition for Engineering Study/Cost Estimate for City Water

I have included the signed petitions from our homeowners in this package. We received 61 petitions back from our homeowners which is greater than the 30% required to move forward with the Engineering Study/Cost Estimate. Per agreement via previous emails, a single page petition was mailed out to each homeowner via the US Mail service due to COVID-19 concerns with going door to door. Again these petitions are included in this package. Please list myself as the petition circulator.

Thank you to everyone at the city of Farmington Hills for their input and help on getting a Engineering Study/Cost Estimate for converting our community water supply system over to city water. It is our understanding that this will be done at no cost to our homeowners or the HOA. We also understand that the process will take at least 6 to 8 months to complete. At that time an informational meeting for our homeowners will be held by the city to present the costs and answer questions. A separate petition will be started at that time to see if homeowners have an interest in the conversion at the cost presented.

Regards,
